Overall characteristics of object handling

On average, children handled 4.54 objects per hour (median = 4.39, $SD = 2.63$, range = 1–10). Across the whole waking day, children handled an average of 21.16 unique objects (median = 20, $SD = 15.2$, range = 1–59), with no significant differences across sites ($M_{\text{Rossel}} = 18.93$, $M_{\text{Tselal}} = 23.24$, $W = 350$, $p = 0.501$).

The frequency of object categories was similarly divided across sites...
